

Floating Window(Floating Media Window) can show Web Page:

- * Cannot show multi floating windows. Only One float at a time.

- * Minimized action changed from pre-Version.

Minimized Float Window can located in free position and memorized by phone-direction till restarting.

Move Float window by grabbing Title Bar of float while letting minimized.

- *Pushing Minimize-Button during Minimized Not cause Moving to Next Corner.

- *Floating Window doesn't change color of Title Bar accoring to whether web page or local file in phone shown(Instead,when local file shown, file Extension added to head of title text).

According to Focused/unfocused, can change colors(in Preference).

Open Bookmark(shortcut file) with Floating Window >>

By default, Single-Click opens its Web page on Active Browser or Float Window(if Focused).

Can Use Long-Click and select 'Open with Float Window' in Menu too.

- * Cannot use long-click in Favorite Listbox.

- *Minimized Window will recover just before size window by pushing Rectangle Button.

(Max size -> Minimized ->Max or Middle size ->Minimized ->Middle)

Open links on Web Page in Base Form Browser with Floating Window >>

a) Long-Click link and select 'Open with Floating Window' in Menu.

CAUTION:"Use Picture-Save Dialog'=ON needed(select in Main Menu). If off,Long-Click causes opening the page in another Browser as default.

b) Double-Tap on Web Page(not link area) in Base Form Browser and select in menu. Same page opened in Float Window.

- *When Float Wind showing Web page, Response-Area for Border-Dragging is smaller than normal, preventing from operation-lost on Web page.

Open links in Floating Window with Base Form Browser >>

Long-Click link in Floating Window and select 'Open another Window' in Menu.

Last active Browser in 2 Browsers in Base Frame used.

Navigate Web-page on Float Window>>

Use Lower-Bar Buttons on Base Form as same as Browsers in Base Form.

Basically Lower-Bar Buttons's Web Operations affect on Active Browser or Float Window.

(To operate Float Window, necessary to be Focused(Activated))

- * 'Search in page' cannot executed in Float.

When Maximized, Lower Bar buttons hidden. So You need to Swipe-Down on Floating Window. This will show Title Bar and lower Bar on Base for a few seconds(or Drag-up bottom-border a little of Float Window)
