
Start Video Player

In default, Clicking Video file starts Video Player.

If 'Music' Player is ON (and 'Video' Player is OFF), Video file starts with Music Player.

+Or Long-click Video file and select 'on Music Player' in Menu shown.

(need to set 'Playlist includes Movie Files =YES'(default) in 'Music'Player Preference).

Video Player not work background or under phone locked. If you would like to listen only to Audio of 'Video' file background, you can playback 'Video' file with 'Music' Player.

Video Size in Screen(Size Mode)

Double Tap, changes Size Mode between 'Height-Base Mode'<=>'Width-Base Mode'.

(and has 'Square Mode' in some case. This mode show video in Square figure at Portrait, adjusting zoom rate automatically)

*see 'Square Size Mode(Video Player).pdf' for details.

Zoom, Pan

Video is zoomed or Panned freely under playback. To recover default size, Double-Tap.

Single Tap

shows All bars. Bars which set to 'hide' are hidden in a few seconds.

ComboBox bar(Upper in VideoPlayer)

Speed ComboBox

Changes Playback Speed(step is changes in Preference)

Operation ComboBox

+Keep Ratio [ON/OFF] :

Some Videos might not shown with proper Width-Height ratio. If so, OFF 'Keep Ratio'. You can adjust to arbitrary ratio by Pinch on screen.

(After that, Set 'Keep Ratio' to ON again and you can Video Zoom Operation with proper ratio your adjusted)

+Square Auto [ON/OFF] :

When can apply square mode, change to square mode automatically.

+Keep Size Mode [ON/OFF] :

When you go Previous or Next video, Size Mode sustained.

This feature work only when Size mode is under 'Height-Base' or 'Width-Base'.

When you Zoom or Pan video, Width(or Height)-Base mode is broken and the next video will be adjusted to show whole part of video(in default action).

+ Go to Video Folder:

Go to the Folder including currently playbaked video file(Under video played,you can move to other folder or Web browsing etc.).

+Repeat Between A-B :

Under Playback, Select Repeat A(menu changes 'Repeat B') then select 'Repeat B'('B' is need to be later time than 'A' in the same Video).

To cancel repeating, select 'Repeat Clear'(after selecting 'Repeat B',clear menu shown)

+Create Playback Shortcut :

This player can memorize and write Zoom and Pan Values to file as 'shortcut' file for video to be played back in the same condition again(with same Zoom and Pan value).If Repeat Between A-B is used, this repeat Time-section memorized too.

Bar ComboBox

+Each Bars Show/Hide :

Settings are memorized each for 'Maximized' and 'Not Maximized' player state, apart.

+Player Position :

Can Change location of video player in Top or Side(Left).

* This is intended for foldable phone(in case that put on table in Landscape,and Upper half screen Upright,etc.).

Maximizeing Button(Square Icon)

Click this to Maximize Video Player itself. To recover size,click this button again(you may need to one-Tap for showing ButtonBar in maximized)

----- Operation Button (Lower) -----

Fast Forward and Rewind Button

Go Back or Forward in Time Position by Clicking or Long-Clicking.

Moving Speed are different in video Paused and under Playing.

When video paused these buttons make slow progress based on frame(not One frame step).

*To see or check all frame of video in Slow, use speed x0.1 or x0.3 etc. from Speed ComboBox.

Prev and Next Buttons

Even if you move to other directry under Playbacking, these buttons plays Previous or Next file in the folder including currently played video file, not concerned to Current Folder in Explorer tree.

* Other buttons are basically same as 'Music' Player.

----- Others: -----

+Video playback in File-Search Result:

While File-Search Result(by Extension Search using 'mp4' etc.) shown, you can open Video File.

Use in Portrait mode(In landscape,video Player cannot be seen).

Prev or Next Button in Player works in Folder including currently played video file, Not File-Search Result. So only using Prev/Next Buttons you cannot traverse all videos shown in Search-Result.

This is not official feature(Not implemented fully for that). But for some purpose,it may be useful and interesting.

+MOV and some format(depends on Android Version) cannot played with Android Media Player(this video player based on).
