Floating Window(Floating Media Window) can show Web Page or Local files(Picture or MHT-extension file created in saving whole page).

Only One Floating windows is shown at a time.

Floating Window Operation>>
For moving, grab title bar of Floating Window.

For Minimize it, long-click Asterisk '*' button on Title bar. So Float Window will be minimized to '*' button on Upper bar of App.
For recover to original size, Click the '*' button on Upper bar of App.

For Maximize float window, click Square Icon button on Title bar. So Float Window will be maximized and the title bar is hidden with no frame in a few second.
Caution:
  When Maximized and Title Bar hidden, to show window frame and title bar again, touching phone edge from outside to inside.

Distinguish whether Localfile or Web Page shown>>
Floating Window shows Web Page or local file in Device. When local file shown, file Extension added to head of title).
Caution;
  Downloaded Picture from Web Page to local folder sometimes cannot be open, erroring "File Not Found". In almost case the file name has '%'(this name is provided automatically at Picture download). For resolving this, rename and remove '%' in the file name.

Open URL links on Current Web Page with Floating Window >>
Long-Click URL link on page and select 'Open with Floating Window' in Menu.
CAUTION:In Main Menu,"Use Picture-Save Dialog=ON/OFF" change sometimes needed.
Details: Long-Clicking URL link on web page has 2 mode.
  a) Long-Clicking causes to open the refered page (or Picture etc.) with another browser, automatically.
  b) Selecting Dialog displayed and you can chose Open with another browser, with floating Window or download Picture etc.

Navigate Web-page on Float Window>>
Use Lower-Bar Buttons on App as same as Browsers on Base Form.
Basically Lower-Bar Web Operation affects on Focused Browser including Float Window.
(So, To operate Float Window, necessary to Focus it first)

Others>>
+ 'Search in Page' not works in Float Window.
